What went well

- We finished the front end for about 80%
- We made a basic log in
- We made a solid base for the sign up page
- We made the queries that we needed
- Meeting attendance

What could've gone better?

- We focussed to much on the login page

What do we want to try next?

- Focussing more one part of the project (employee page)

What puzzles us?

- The connection between front en back end
- How to refocus on which part to develop, because of a team member leaving
